

MARINE 3 ICE BUST

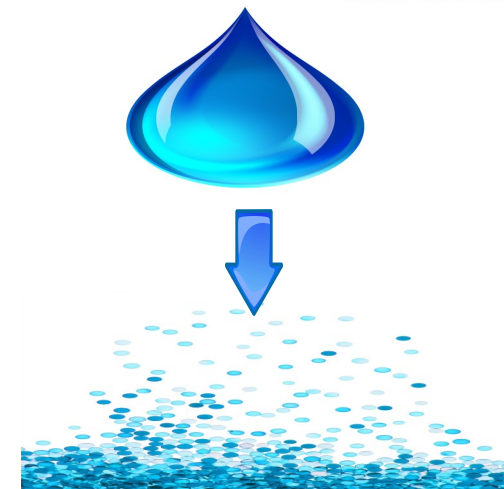

By the blending of our patented Marine 3005 anionic surfactant made of seawater and calcium chloride we can now offer the market a cost effective environmentally friendly de-icing agent.

De-icing/Anti-icing – MARINE 3 ICE BUST provides effective de-icing/anti-icing when applied either before or after a severe frost or snow storm. When used prior, it inhibits the bonding of snow and ice to the pavement, making it easier for snowploughs to clear roads down to the bare pavement. When used as a de-icing product, Marine 3 ICE BUST will quickly begin to melt snow and ice, breaking the bond by de-agglomerate calcium chlorite creating a sticker solution keeping chemicals in suspension with an non slippery surface.

DOSAGE:

60 TO 120 LITRES PER KILOMETER

De-agglomeration
